

Nokenchain is a decentralized firm aiming to support all players in the economy who will be impacted by the Blockchain : individuals, companies, non-profit organizations and institutions.

Today, we already know many sectors that are undergoing rapid change such as health, finance, real estate, banking, insurance, etc.

Nokenchain is an ecosystem of inventors, investors and entrepreneurs of tomorrow.

ECOSYSTEM

The Nokenchain ecosystem was designed to be built like the Blockchain - that is to say decentralized, fast, secure and transparent.

The dematerialized aspect of Nokenchain will then take on its full meaning, that is to say through human exchanges without which life would have no meaning.

NOKNs

NOKNs are Waves tokens whose rewards are accessible by purchasing a "Stablenode (Sn)". This token allows access to Nokenchain offers at a preferential rate.

The total number of nokencoins is 210 million.

Acquiring a NOKN Stablenode then allows you to acquire stablenodes from major cryptocurrencies such as bitcoin (BTC) or ethereum (ETH).

Nokenchain's stablenodes protect the value of your collateral in US dollars with rewards distributed weekly.

STABLENODES

Safeguarded capital, cryptocurrency rewards

WHAT WE OFFER

Advice

We support you throughout your project, from fundraising to marketing, depending on the needs and necessity of your tokenization or blockchain project.

8

Creation

With Nokenchain, you can create tokens or blockchains for all your projects. We advise you in choosing the appropriate blockchain or token.

A STRATEGIC CHOICE

Blockchain

Ideal for an ecosystem. Perfect for large-scale globalized projects according to the needs in terms of security, speed and efficiency.

Tokenization

Great for representing a product, service, coupon, or recognition of something. It can also be a share of property or a right to vote.

TOKENS FUNCTIONS

Utility token and/or Security Token

It is a digital token allowing the investor to pre-order a product or service and / or get a discount.

Here the usage is different. It corresponds to a share of and allows the ownership distribution of dividends or voting rights.

Among utility and security tokens, there are fungible (divisible) and non-fungible tokens. It depends on how you think about the tokenized object or service.

QUESTIONS

Who will use it?

When is it going to be used?

Where will it be used?

My token will represent an object or a share of property?

A right to vote?

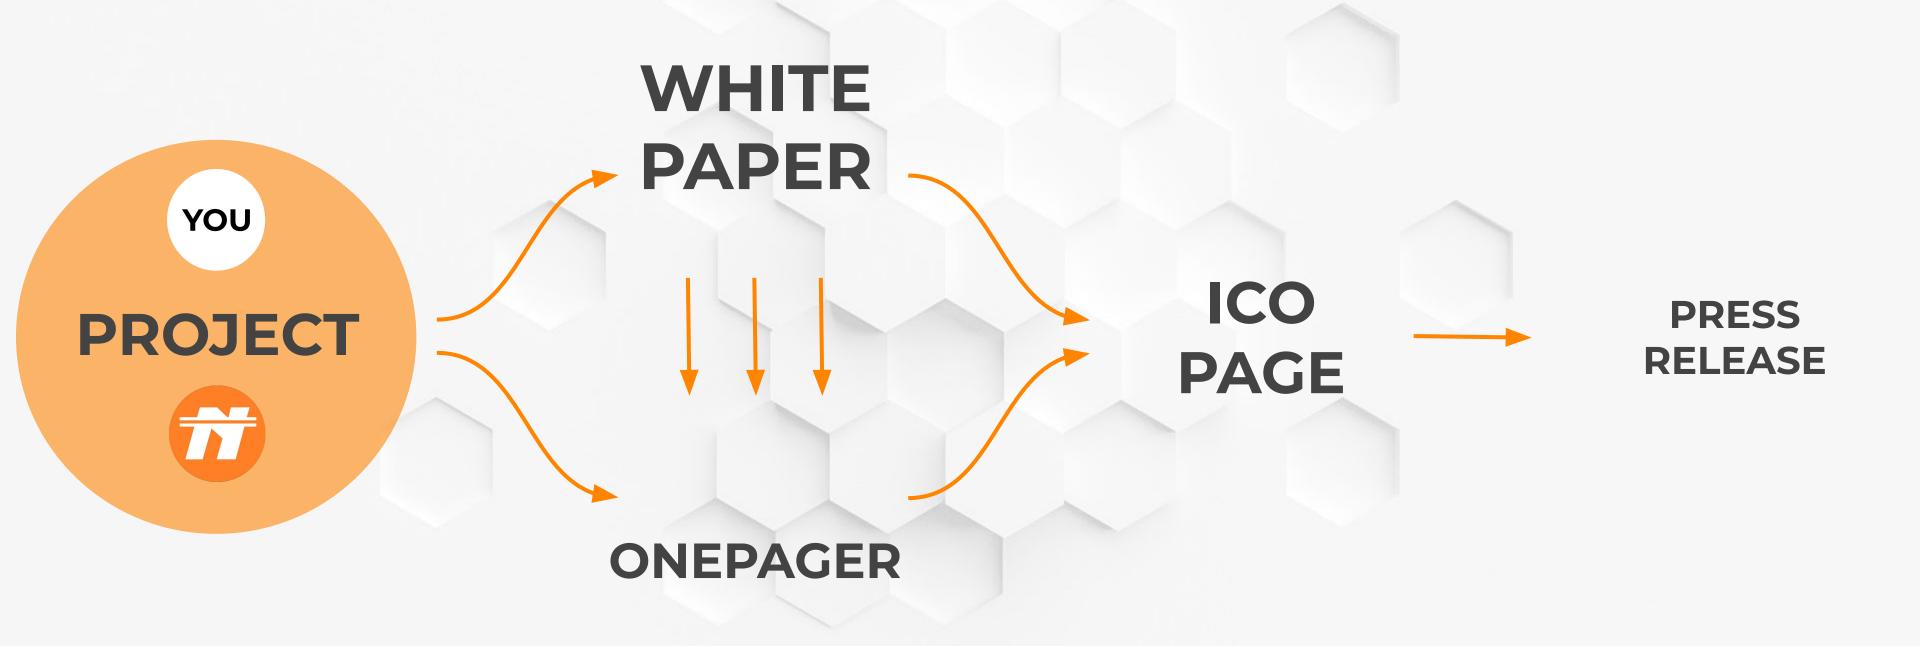

What consequences?
