

Platform for creation of tokens and blockchain income

It's time to build your web 3.0 presence and income !

Nokenchain allows everyone (individuals, companies, athletes, artists, entrepreneurs, videographers, associations, ...) to create their token or their cryptocurrency (blockchain) as part of its tokenization services as well as passive income 3.0 as part of its stabelnodes (virtual masternodes) and related services. Nokenchain also educates the public about this huge market which is currently growing during the 2020s.

This project is the first in French-speaking countries to make it possible to create tokens easily (as easily as you register a domain name), without technical knowledge, and to set up future habits and market standards.

Problems

Currently there are 9 issues in this sector :

- Most people don't know what a token is and what it can be used for (as most people didn't know in the 1990s what a website was and what it could be used for). On a larger scale, most people still don't know how to use cryptocurrencies and / or what Blockchain or smart contracts really are.
- Most tokens are created on the Ethereum platform, which requires knowledge of the Solidity programming language. This is a big obstacle if, for example, an individual or an athlete wants to easily create his token.
- There is not really any organization on the market yet (as for domain names with ICANN for example), although this is progressing.
- Most of the tokens created are for cryptoprojects, not yet for individuals or objects.
- In another register, the Proof of Work consumes a lot of electricity.
- Talent is not yet considered a metric by the general public. You can have people who are talented in an area who can never really exploit it, which is a loss for society and humanity.
- People who have reached a certain level must be able to make a living from their activity.
- Contract signatures, transactions and interactions between the various participants in a system are slow, expensive, humanly outdated, and not that productive. Not to mention the problems of distribution of wealth.
- Private interests decide who (or what) to watch, what to buy, what involvement to have, etc.

Nokenchain's solutions

- Create an ecosystem that will provide simple tools for everyone, more interactions and commitments.
- Create a new system of social connections through tokenization.
- Help young talents through tokenization, to increase their chances of success.
- Increase the chances of contracts for different professional users.
- Allow fans more interactions and choices.

- Enabling brands to access new advertising channels much more easily, quickly and directly.
- Redistribute money better (fewer intermediaries, direct contacts, less costs, ...).
- Develop knowledge of tokens among the general public through communication campaigns and simple tools.
- Facilitate the creation of tokens without computer knowledge.
- Organize the market through a registrar / reseller system.
- Develop creation of tokens for individuals and objects.
- Develop Proof of Stake and masternodes / stablenodes.
- Refocus decision-making on the collective.

All this is achieved by creating a large, easy-to-use tokenization platform with tools for each type of token, as well as incentives to join and promote the platform.

Roadmap

July 2019 : Project launch (website + Facebook + Twitter + Reddit + Bitcointalk) and writing of the whitepaper.

August 2019 : Finalization of the whitepaper and publication (+ translation). Discussions with the various stakeholders + establishment of press relations for the announcement of the fundraising + finalization of the team of advisers.

September 2019 : Private sale of tokens + setting up of bounties (rewards) + registration of the first investors.

October 2019 : Crowdfunding campaign (public sales). Phase 1.

November 2019 : Start of the public sale (ICO : fundraising in cryptocurrencies). Phase 1 and 2.

December 2019 : Deployment of the first service (simple creation of tokens).

January 2020 : Establishment of the technical team + deployment of nokencoin (NOKN) + development of Virtual Proof of Stake (VPoS) technology + first contacts with exchanges + tokenization launch party + end of the ICO.

February 2020 : Development of Nokenchain Beta 1.1 (putting all services online) + contacts with exchanges + deployment of amusement tokens + airdrop.

March 2020 : Communication (visual campaign) on social networks and with our community + sending airdrop tokens + setting up collection tokens + contacts with exchanges + site security + publication of tutorials.

April 2020 : IEO on Vindax + listing on Vindax + Beginning of the work on setting up the Beta 2 site (securing / improving) + launch of Nokenchain phase 2 (new ideas) + communication.

May 2020 and beyond : Development of tools + site + Virtual Masternode technology + communication and news + commercial development + addition of legal pages / ToS / GDPR / cookies + launch of virtual masternodes + security audit. Beyond that, development of the site, KYC and communication.

Why participate in the fundraising for this project ?

- Because the tokenization of the economy is something that is already globally progressing.
- Because when a technology capable of changing habits comes along, those who are interested in it from the start are the winners of the system.
- The tokenization of individuals is a growing phenomenon, but still in its infancy.
- The system is not limited to a specific sport or category. It is universal !
- Blockchain and Tangle are technologies of the future.
- The cryptocurrency Nokencoin (NOKN) is intended to be listed on crypto-exchanges, ensuring that you can convert it back into another cryptocurrency, in euros or in dollars, if you wish.
- A single purchase of tokens on the right person or the right project can win you the jackpot. *If you had bought 100 euros of bitcoin in 2011, they would have been worth 2 million euros at the end of 2017...*
